

Inspire...Educate...Transform.

Data Science: Big Picture

Also, introduction to CPEE program

Dr. K. V Dakshinamurthy
President, INSOF

May 30, 2014

Introduction

- An exciting and interesting career path
 - Visualization, communication skills
 - Programming and hacking skills
 - Mathematical skills

Program

- Mentors
- Scientists
- Piazza
- R and Hadoop programming environment

Structure

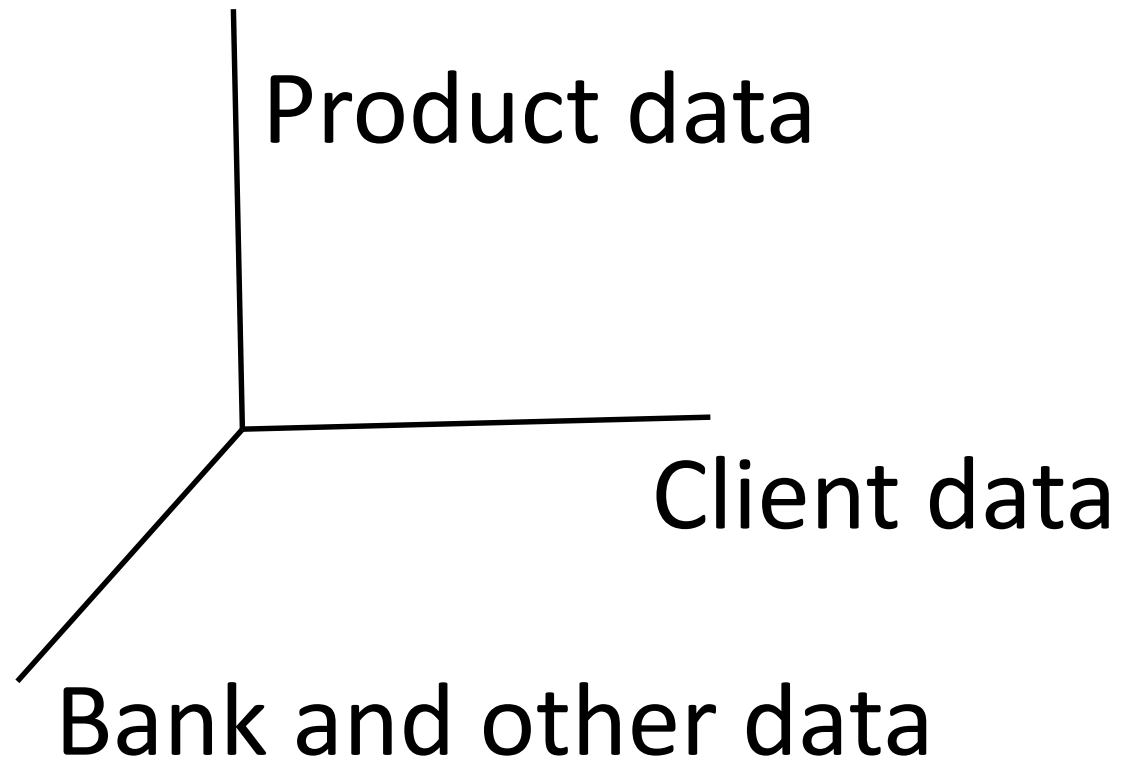

- Lectures: Morning
- Afternoon: Quizzes (written), lab and project

Help banks minimize loss?

- What is the probability of default?
- Can we predict who is likely to not pay?

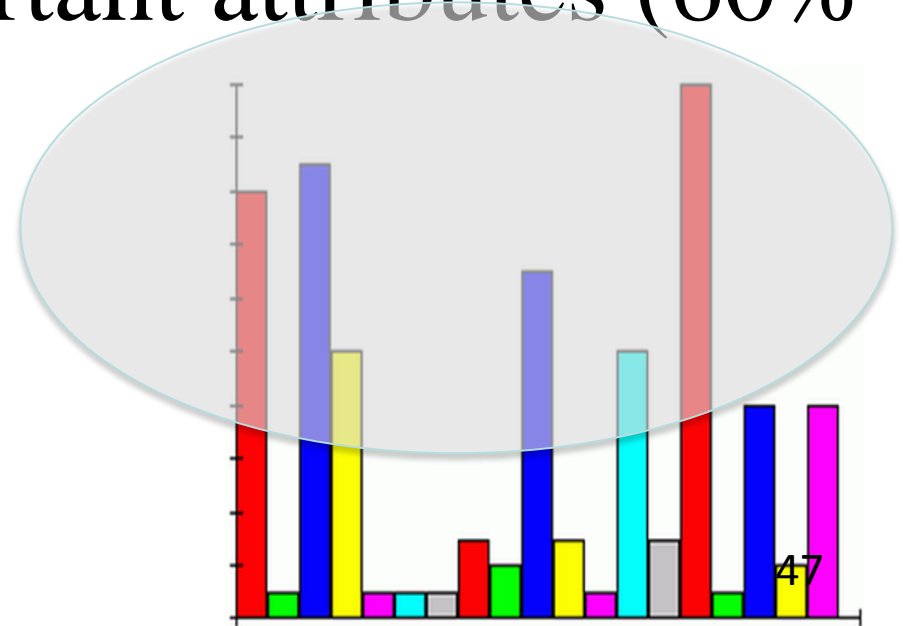

Lots of experiments

- What attributes to use
 - Use all attributes on 10% data (50% accuracy)
 - Use only the important attributes (60% accuracy)

Refining the attributes

- Is a 25 year old going to be different from 26?
- Group all below 30 as young
- Accuracy went up to 65%

Data scientist's way of thinking

GOAL

Search for patterns and not theories

A specific metallic component is wearing out with use in an acidic environment.

How do we understand and use this component

Approach 1...Science

- A chemist studies what happens to the material in acid and understands that the metal is reacting with the hydrogen in the acid to form a vapor. She develops the equations and science behind them that the wearing is a function of acidity and temperature.

Approach 1...Engineering

- An engineer tests the degradation in a few concentrations and temperature, plots the degradation, validates the theory and comes up with thumb rules

Deductive learning

- A few hypothesis that cannot be proved.
- Rest of the science is developed by extending these using mathematics and experimentation.

WELCOME TO THE INDUCTIVE MODELS

Approach 2

- Measure the degradations in hundreds of conditions (temperatures and concentrations for various times)

Result is same but

- Do not know the reasons (causations are not known and only correlations are identified)
 - Walmart example (does not tell how to act)

Where it does not work

- Fails when randomness prevails
- Need a lot more data to come to the correct conclusions

Where does it work

Where data is not an issue

Data science

$$\begin{aligned}
 v_q &= -r_s i_q + \frac{\omega_r}{\omega_b} \Psi_d + \frac{p}{\omega_b} \Psi_q, \\
 v_d &= -r_s i_d - \frac{\omega_r}{\omega_b} \Psi_q + \frac{p}{\omega_b} \Psi_d, \\
 v_o &= -r_s i_o + \frac{p}{\omega_b} \Psi_o, \\
 0 &= r_{aq} i_{aq} + \frac{p}{\omega_b} \Psi_{aq}, \\
 v_f &= r_f i_f + \frac{p}{\omega_b} \Psi_f, \\
 0 &= r_{ad} i_{ad} + \frac{p}{\omega_b} \Psi_{ad}, \\
 T_e &= \frac{3}{2} \frac{P}{2} \frac{1}{\omega_b} (\Psi_d i_q - \Psi_q i_d), \\
 p\omega_r &= \frac{P}{2J} (T_a - T_e),
 \end{aligned}$$

$$\begin{aligned}
 p\theta_r &= \omega_r, \\
 p\theta_e &= \omega_e, \\
 \delta &= \theta_r - \theta_e, \\
 \omega_m &= \frac{2}{p} \omega_r,
 \end{aligned}$$

Stable

Ascending

Descending

Variable

Currently

- A skill that employers can't say no to
- Sexiest job of next decade

IS INDUCTIVE LEARNING BETTER THAN INTUITION?

Power of models

Robyn Dawes 1979: “The Robust Beauty of Improper Linear Models in Decision Making”

Simple models do better than experts

IN GOD WE TRUST

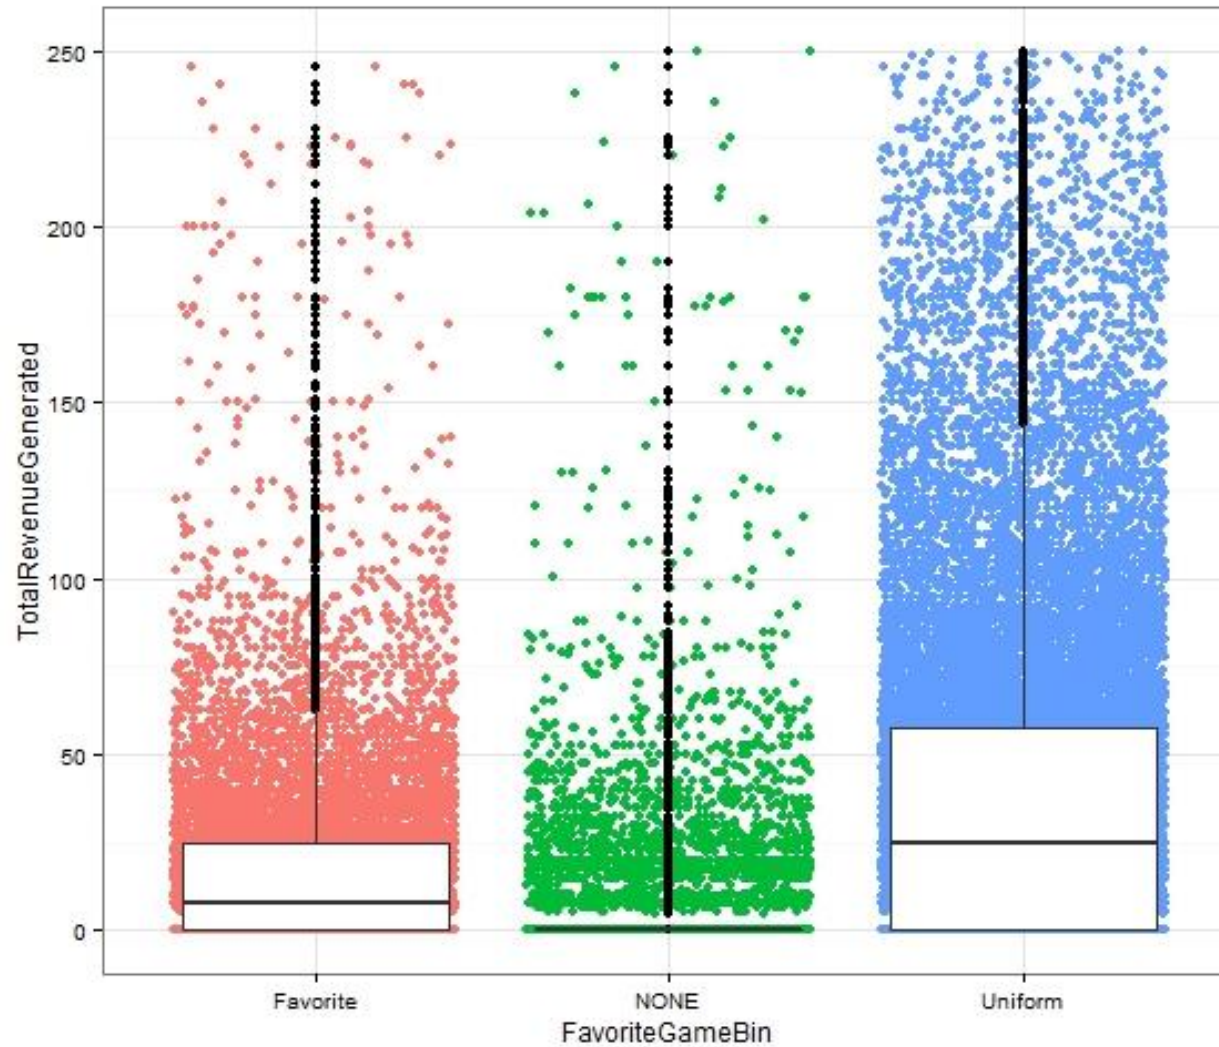

**ALL OTHERS MUST
SHOW DATA**

Are Americans happy or unhappy

Which customers are buying

Fast track ML

Classification; Supervised and Unsupervised

Classification is partitioning the space

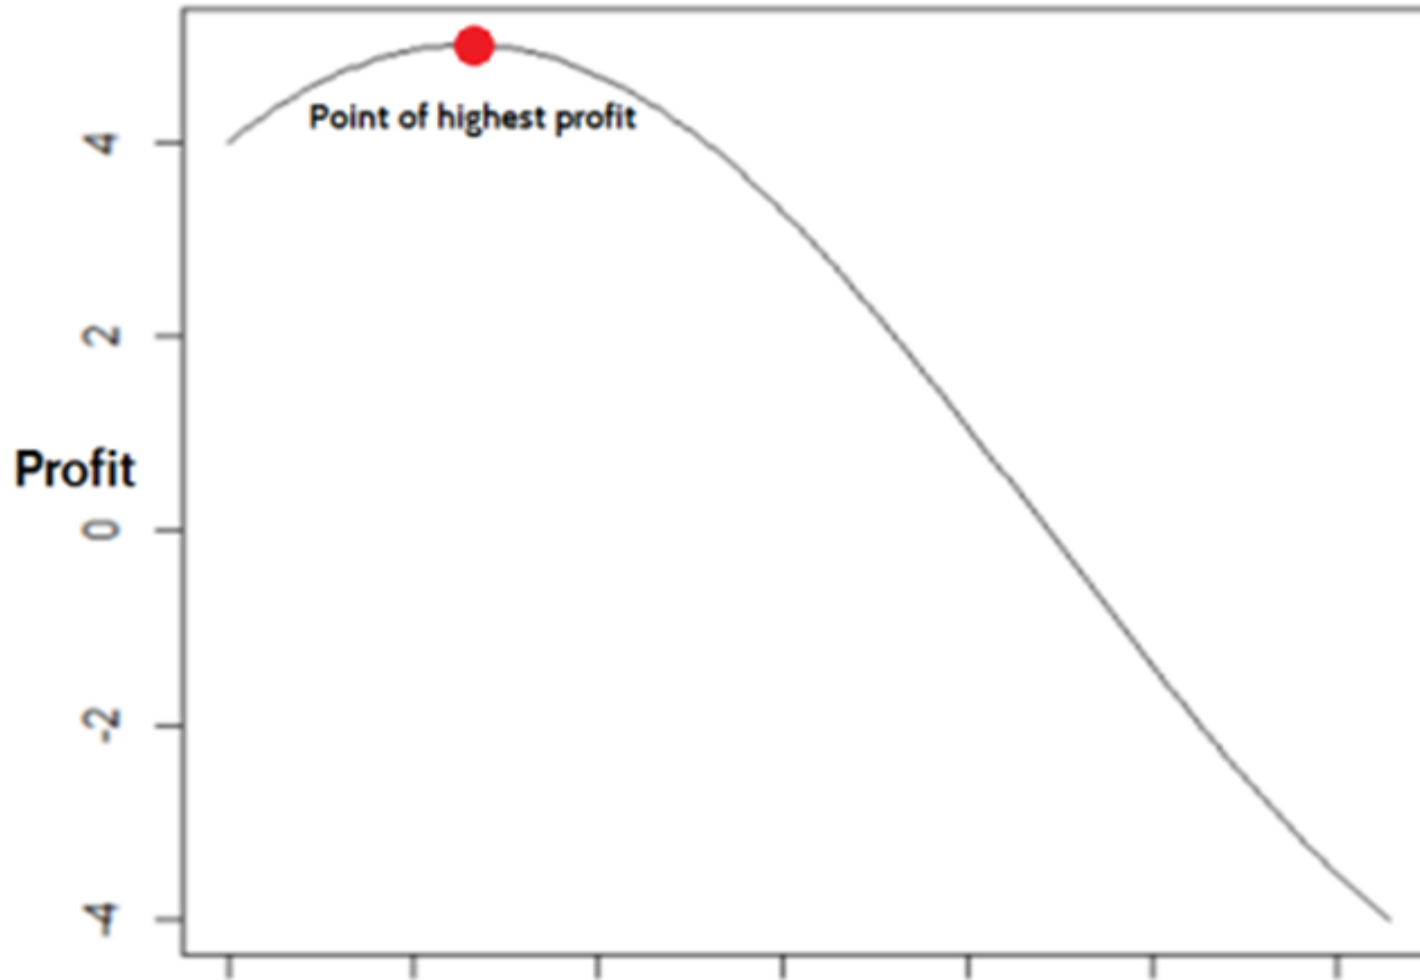

Classification is partitioning...

Forecasting is finding the line/plane closest to all points

Optimization

Simulation

- Individuals are easy but groups and interactions are complex
